اسم الطالب: محمد غازي الناصر

الرقم الجامعي: 1348

قسم هندسة الاتصالات ولالكترونيات

جامعة تشرين السنة الخامسة

Second Homework

Question 1: TCP Server/Client Quiz App with Multi-threading?

As an improvement to previous first homework, build a TCP server and client quiz application using Python. The server should handle multiple client connections simultaneously using multi-threading. The application should allow clients to connect, participate in a quiz, and receive their quiz scores upon completion. Requirements:

- A. The server should be able to handle multiple client connections concurrently.
- B. The quiz should consist of a set of pre-defined questions stored on the server.
- C. Each client should connect to the server and receive the quiz questions.
- D. Clients should send their answers to the server.
- E. The server should keep track of the scores for each client.
- F. At the end of the quiz, the server should send the final scores to each client.

Socket Client code

```
import socket
ClientMultiSocket = socket.socket()
host = '127.0.0.1'
port = 3000
print('Please Enter Your Name: ')
    ClientMultiSocket.connect((host, port))
except socket.error as e:
    print(str(e))
res = ClientMultiSocket.recv(1024)
while True:
    Input = input()
    ClientMultiSocket.send(str.encode(Input))
    res = ClientMultiSocket.recv(1024)
    print(res.decode('utf-8'))
ClientMultiSocket.close()
```

Sockets Server code

```
import socket
import os
import Questions
from _thread import *
ServerSideSocket = socket.socket()
host = '127.0.0.1'
بورت الاستماع #
port = 3000
 hreadCount = 0
try:
    ServerSideSocket.bind((host, port))
except socket.error as e:
    print(str(e))
    في حال الاتصال اطبع أن السوكت تستمتع وتنتظر اتصالا #
print('Socket is listening..')
عدد الاتصالات المسموحة في نفس الوقت #
ServerSideSocket.listen(5)
def multi_threaded_client(connection):
    connection.send(str.encode('Server is working: Please Enter Your Name:'))
    name =connection.recv(2048)
    connection.send(str.encode((' Welcome '+name.decode('utf-8')+' select the
correct answer a or b Or c or d, Press Enter to start')))
    qlist = Questions.QuestionsList.question
    يشير الى رقم السؤال الحالى #
    counter = 0
    العلامة التي قام الطالب بتحصيلها #
    mark = 0
    قم بالمرور على جميع الاسئلة بالتتالى #
    while counter< len(qlist):
        ارسل السؤال للمستخدم #
        connection.send(str.encode(qlist[counter].question))
        انتظر الجواب #
        data = connection.recv(2048)
        قم بتخزين جواب المستخدم #
        qlist[counter].userAnswer = data.decode('utf-8')
        if not data:
```

```
break
        if qlist[counter].userAnswer == qlist[counter].answer:
        انتقل للسؤال التالي #
        counter = counter+1
    counter =0
    correctanswers =""
    while counter< len(qlist):
        correctanswers = correctanswers +"\ncorrect answer: "+
qlist[counter].answer+" your answer is: "+qlist[counter].userAnswer
        counter = counter+1
    correctanswers = correctanswers+('\nyour mark is: '+str(mark)
+"/"+str(counter))
    connection.sendall(str.encode(correctanswers))
    connection.close()
الاستماع حتى يأتي اتصال جديد وفي حال جاء اتصال قم بتحويله لبورت جديد واطرح الاسئلة عليه #
while True:
    Client, address = ServerSideSocket.accept()
    print('Connected to: ' + address[0] + ':' + str(address[1]))
    start_new_thread(multi_threaded_client, (Client, ))
    ThreadCount += 1
    print('Thread Number: ' + str(ThreadCount))
ServerSideSocket.close()
```

Questions code

```
class Ouestion:
   def __init__(self, question, answer,userAnswer):
       self.question=question
       self.answer=answer
       self.userAnswer=userAnswer
class OuestionsList:
    question = [Question("select the even number:
               d.11","b","")
a.3 b.2 c.9
               ,Question("select the odd number:
a.3 b.2 c.6 d.13","a","")
               ,Question("select the biggest number:
a.3 b.2 c.6
               d.13","d","")
                ,Question("select the smallest number: a.8 b.0 c.-
   d.13","c","")]
```

```
Please Enter Your Name:
Mhd Al-Nasser
Welcome Mhd Al-Nasser select the correct answer a or b Or c or d, Press Enter to start

select the even number: a.3 b.2 c.9 d.11
b
select the odd number: a.3 b.2 c.6 d.13
a
select the biggest number: a.3 b.2 c.6 d.13
d
select the smallest number: a.8 b.0 c.-5 d.13
d

correct answer: b your answer is: b
correct answer: a your answer is: a
correct answer: d your answer is: d
correct answer: c your answer is: d
your mark is: 3/4
```

Question 2: Simple Website with Python Flask Framework

Create a simple website with multiple pages using Flask, HTML, CSS, and Bootstrap. The website should demonstrate your understanding of web design principles.

Requirements:

- A. Set up a local web server using XAMPP, IIS, or Python's built-in server (using Flask).
- B. Apply CSS and Bootstrap to style the website and make it visually appealing.
- C. Ensure that the website is responsive and displays correctly on different screen sizes.
- D. Implement basic server-side functionality using Flask to handle website features.

My website code

```
from flask import Flask, render_template, request, redirect, url_for import os app = Flask(__name__)

# تحديد مسار الصفحة الرئيسية "
@app.route('/')
def login():

# إذا كانت كلمة المرور خطأ أهر رسالة الكلمة خطأ try:

message = request.args['messages']

return render_template('login.html', message=message)

except:

# إذا كانت صحيحة قم بالتحويل للصفحة الرئيسية "
return render_template('login.html', message="")
```

```
# الصفحة الرئيسية # @app.route('/indix', methods = ['POST', 'GET'])

def main():

# مكلمة السر والمستخدم القرء على القرء كلمة السر والمستخدم القرء كلمة السر والمستخدم القرء على القرء كلمة السر والمستخدم القرء القرء
```

ملفات css and html and wep site page مرفقة بملف مضغوط
